

## Wireless Access at CAVOC (District Laptops Only)

### **This needs to be done at school-**

The laptop will need to have the workstation-only button enabled to show at the login screen. To do so:

1. Connect the laptop to the school network while it is still in the school building.
2. Login with a teacher account.
3. On the desktop right-click on My Network Places and select Properties.
4. Right-click on either Local Area Connection or Wireless Network Connection and select Properties.
5. Double-click on the Novell Client for Windows to bring up the properties.
6. Select the Advanced Login tab. Scroll to the bottom and select the Workstation Only option. Change the setting from OFF to ON.
7. Click OK, OK to save the changes.

The laptop should now allow you to login to the workstation only without requiring a direct connection to the District network. When the login window comes up, check the workstation only box and login using the teacher login name/password used in #2 above.

### **At CAVOC – you will need to -**

IE - Tools, Internet Options, Connections, Lan Settings, Uncheck the 'Use a Proxy Server' box.

Or...

Firefox - Tools, Options, Advanced, Network, Settings, select the Direct connection box. The options may be slightly different depending on the version of Firefox.

The laptop's wireless configuration should match the wireless configuration

To get back on the internet when the laptop is brought back to school the proxy settings above would need to be changed back.
