

# Accessing Guest Wireless at RHS for Students

Start up your device from a powered down condition - not from sleep mode/hibernation mode, etc.... The machine should obtain an IP address in the GUEST range automatically.

Use the device's wireless utility to scan for the SDRGUEST wireless network and connect to it. The process will vary because of the different makes/models of devices and your wireless utility. There is no password for the SDRGUEST wireless.

Open your web browser of choice. **Change the connection/proxy settings to go through our web filter - settings should be set to go through our proxy server at 172.22.0.10, port 8714.** The process to change the proxy settings will vary depending on the browser you are using - IE, Firefox, Chrome, etc....

Use the CITRIX link on the RHS LMC homepage to login and access your RHS network files and selected application software.
